

### InterNoded Mobile Device Manager On Demand

Mobile infrastructure management with support custom to your needs

#### Features & Benefits

##### Full mobile device management functionality using enterprise-class software

- Single console centralizes control and reporting on all enterprise smartphones, wireless servers, and carriers
- Supports BlackBerry Enterprise Server™, Good Mobile Messaging™, and Microsoft's Active Sync for Windows Mobile and iPhone devices (partial support)
- Self-service user portal enables 24x7 activations and support —without help desk intervention
- Automated IT policy deployment eliminates the risk of human error
- Advanced mobile application management accelerates and controls deployments
- Device-side client improves service and control with proactive reporting
- Automated system optimization and load balancing of wireless servers increases stability and scalability
- Blends with corporate intranet with user interface branding
- Integrates with Microsoft Exchange™ and IBM Lotus Domino™ and supports any LDAP Server

##### Key Benefits of IMDM On Demand

- Ensure a predictable low monthly fee based on the precise level of service you choose
- Free your business from daily monitoring, maintenance, updates, and mobile application management chores
- Spend more time and resources on IT innovation and strategic objectives
- Seamlessly extend your IT department so that the users have a consistently high support service experience
- Adopt operational best practices to accelerate business results, lower costs and increase security.
- Proactively eliminate problems and enable the full potential of enterprise mobility

You can have all the benefits of enterprise-class mobile device management without the need to manage a complex in-house infrastructure.

##### Predictability and peace of mind

InterNoded Mobile Device Manager (IMDM) On Demand allows you to choose the configuration that matches your business and the level of support that matches your bottom line. All for a low monthly fee.

IMDM On Demand utilizes InterNoded Mobile Device Manager, an award-winning software product that enables end-users to get a fast activation on their device of choice without IT involvement. At the same time, businesses lower costs and get the assurance that each device has the right security policies and applications, regardless of device type, carrier, or platform.

##### A monthly plan with the options you need

Choose the level of support that is right for your business. Then let InterNoded take it from there.

##### Wireless Management

InterNoded administers and supports your entire wireless environment, including mobile device management (IMDM) and your wireless middleware servers or clients, such as BlackBerry Enterprise Server (BES), Good Mobile Messaging, or Active Sync.

##### Help Desk Support Options

- **Tier I - End User Support:** Includes Wireless Management plus 24x7 direct end-user support
- **Tier II - Help Desk to Help Desk:** Includes Wireless Management plus 24x7 access to Tier II help desk support
- **Tier III - Engineer to Engineer Support:** High-end support from world-class experts for the most complex challenges.

##### A configuration that works for you

From small businesses to the largest corporations, InterNoded experts help you design a secure configuration that can meet the needs of any organization

**At your site** - InterNoded remotely manages all your servers

**Partially Hosted** - InterNoded hosts your Domino BES servers and IMDM while your Domino email server stays in-house.

**Fully hosted** - InterNoded hosts your entire mobile infrastructure including your Exchange or Domino email servers.
